From this account it would appear that the Arawak-speaking people in this area were no longer using the large oval-shaped straw-thatched house which is still used by many of the Arawak-speaking people to the north. The covering used may have been made from "piri," a species of bulrush, which the Terena still use for making mats. This type of house was easy to dismantle and move, which may account for the probable abandonment of a more permanent type of structure.

Sánchez Labrador then goes on to describe the inside of the house:

> Each captain lives together with his brothers and their kin in one house. . . . Every house has five doors, in order that no one should get in each other's way. There is one door at each end and three on one side. When it rains, they cover their doorways with mats of rushes. Near the doors are the fireplaces and kitchens, which are no more than three movable stones, which act as a tripod on which they place their curiously worked pots. The food is cooked without any other spices than water. At the back of the house are the beds, that is, mats spread over the floor. It is astonishing that although these people grow cotton they do not use hammocks. [Ibid., vol. 2, p. 278.]

In 1845, when the first groups of the Terena were already near Miranda in Brazil, we get a more definite description of Terena houses from Castelnau:

> In the village there are about 100 to 120 houses, joined to each other. They are long huts forming a circle around a big square. They resemble great "ranchos" covered with immense roofs of palm fronds. [Castelnau, 1850–59, vol. 2, p. 391.]

As to weapons and the interior of the house, Castelnau has this to say:

> The weapons of these people are spears with iron points, clubs, bows, and small arrows, and the "bodoque," an instrument which resembles a bow but has two cords united by a piece of leather in the middle on which stones are placed for shooting. In the inside of each hut there is a bed made of a platform of cane, supported by four stakes, which is covered with a hide of a bull. [Ibid., vol. 2, p. 469.]

The passages just quoted give us a general description of Terena houses. The descriptions are nearly 100 years apart. Sánchez Labrador states that the occupants of the house slept on the floor, while Castelnau states that they slept on skin-covered platforms. The Terena say that they did not use hammocks until recently and that they slept on bamboo platforms, *ipé*, covered with skins or reed mats called *kitúri*.

* [work published in 1850-59, see bibliography, P. 69 -- Analyst]

and a platform bed resting on forked sticks. Besides himself, his wife, and six children, the house is shared with his mother, a brother, and a male cousin. Eleuterio, his wife, and the small children sleep on the bed, and the rest of the occupants sleep in hammocks. Eleuterio's wife uses iron kettles for most of the cooking, but clay pots are sometimes used also. The occupants of the house eat out of clay and wooden dishes. The house is situated on a lot in the village and is surrounded by a number of mango and orange trees. Eleuterio has two dogs, a hen with three chicks, and a young rooster.

Eleuterio came to the Post with his uncle and grandfather when he was 5 years old. His grandfather, who was a medicine man, came from the Chaco. Both his uncle and grandfather were baptized in the Catholic faith, although his grandfather never became a regular church member. Eleuterio was also baptized in the Catholic faith. At the Post he attended the Protestant mission school until he was 12. During these years he lived with and worked for the English missionary, herding his livestock and carrying mail, but was not converted to Protestantism.

After leaving school he lived with his uncle until he was 16, assisting him in cultivating his little farm at the Post. He then went to Aquidauana where he worked for 2 years as a mason's assistant and later helped a Japanese vegetable farmer. He then went to work on a fazenda, taking his mother with him.

After working 3 months on the fazenda he returned to the Post to help his grandfather, who was becoming very old. After his grandfather died he married and went to live with his father-in-law, where he remained for 4 years. During this time he, together with some other Indians, worked for a while on the telegraph line. In 1932 he and several other Indians went with the manager of the Post to fight in the revolution, staying away for 6 months.

When he came back he built his own house in the village and began working for the manager of the Post, doing many things, such as building repairs, blacksmithing, and farming, for which he receives 14 cruzeiros per day. He does not cultivate land of his own. He has been the captain of one of the three football teams and the manager of the sports club where dances are given.

one room there is a bed and hammocks, and the other room is set up with shelves and a counter. His goods are on the shelves or on the floor behind the counter. He has a beam scale suspended from the ceiling. In 159 [352] [353] [405]

Domingos and his family cultivate a large field outside the village, growing manioc and sugarcane. He produces manioc meal and raw sugar, which he sells in his store. In Taunay he buys rice, maté tea, beans, salt, kerosene, matches, cigarettes, soap, white sugar, and candy, which he sells to the Indians. [241] [443] [438]

Domingos learned to read and write and to do simple arithmetic in the mission school. Until 15, he worked with his father on his little farm. Later he went periodically to work on the neighboring fazendas. In 1932 he began selling meat and other goods, but when his wife died he abandoned the store for some years and worked away from the village. [891] [999]

CARTER

Antonio Aurelio was born in Bananal about 65 years ago. He is married and has six grown children. Aurelio, his wife, and four of his children live in a five-room, painted adobe house with a tile roof. The furniture consists of home-made tables, chairs, and benches, and a bed for Aurelio and his wife. The children sleep in hammocks. In his front room Aurelio has an old typewriter and on a shelf two old cameras, which he takes great pride in being able to use. [592] [352] [513] [405] [416]

Aurelio owns two horses, a cow, a calf, a dog, 10 chickens, and 4 turtles. Outside the village he cultivates five lots, growing principally manioc. His daughters make manioc meal, which he sells to the Indians. Aurelio himself transports goods and people between the railroad station at Taunay and the Post. He charges 10 to 20 cruzeiros for a trip to the station, some 4 km. away. [231] [241] [494]

Aurelio learned reading, writing, and arithmetic from a Brazilian while he was working away from Bananal. He later studied with a Protestant missionary. He now reads the Bible in Portuguese, Spanish, and Guaraní. He understands a little English. He reads newspapers and is the scribe of the village. He has traveled widely, first as a cattle driver and later when he gave evidence about Indian affairs in Rio de Janeiro. [212] [797] [191]

structured. The type of house a Terena will build depends on his financial resources as well as his social prestige and the type may vary from a grass hut to a painted adobe house with a tile roof. All Terena houses, even when they are made of dried grass, are of the Brazilian pattern, that is, rectangular with a gable roof. A house generally has two rooms, with a lean-to kitchen in the rear. Each room usually has one window without glass which can be closed for the night by a shutter. There are usually a front and a back door. The floors are always of beaten earth.

As the village is laid out in rectangular blocks the houses form a regular pattern facing the streets, with gardens and orchards in the rear. The few Terena stores imitate the stores in Taunay by painting "Casa (and name of owner)" over the doorway. In some cases adobe houses are whitewashed inside. A few dabs of yellow or red paint cover the underlying whitewash.

A study of house types on the basis of building material and the presence or absence of paint gives the following distribution for the 86 buildings in the village:

Type:	Number
(1) Mud and wattle with thatched roof	23
(2) Adobe with thatched roof	19
(3) Painted adobe with tile roof	14
(4) Palisade walls with thatched roof	9
(5) Painted adobe with thatched roof	8
(6) Painted brick with tile roof	8
(7) All grass on bamboo frame	3
(8) Mud and wattle with tile roof	1
(9) Painted brick with thatched roof	1

Upon entering a Terena house one is immediately aware of the scarcity of furniture. Only the best houses have a table made from rough hand-sawn planks. It appears that the table is more for show than for use, as the Terena eat around the cooking fire at the back of the house. The best houses also have one or two rough wooden benches or a chair or two made from box lumber. Almost every house has a low platform bed resting on forked stakes driven into the ground for the owner and his wife. Other occupants sleep in home-made hammocks, which during the day are hung against the wall. In several of the houses regular spring beds with mattresses are found. For covers the Terena use a single cotton or light woolen blanket. Blankets are not an important item, for during

[Banana Village]

cold spells the people sit around fires in the early morning to keep warm. 352 513

Containers found in the houses are of the following types: 415

(1) Netted bags made from *yulú* fibers used for carrying and storing sweetpotatoes, maize, and other garden produce. Small bags are called *verí* and the large ones *nimaké*. These bags can be carried on the back or used as saddlebags. The mesh averages 4 inches and the size of the twine varies with the size of the bag, generally being about the size of heavy cotton fish netting. [286] [482]

(2) Round baskets of various sizes plaited from thin strips of wild bamboo or other wild cane. Some of the larger baskets have handles, so that they can be hung from a peg in the wall to keep dogs and chickens from taking the contents. [285]

(3) Large wide-mouthed clay pots for storing water, ranging from 1 to 4 gallons in content. These pots are made by the coil method and are unglazed and undecorated. It is reported that in the neighboring village of Cachoeirinha some of the Terena glaze and decorate these large pots. [323]

(4) Flat, glazed pottery dishes are also found. These are of a dark-red color, without decoration, and are used for serving food.

(5) Cast-iron pots purchased in Taunay are widely used for cooking food. [252] [439]

(6) Empty kerosene cans are always in demand for storing water and meal. Any empty can is readily accepted by the Terena.

(7) Calabashes of various sizes cut to form cups and ladles are used for many purposes. Chimarron or maté tea is drunk from calabashes. [824] [272]

(8) Flat iron pans about a yard in diameter are supplied by the Post for toasting manioc meal. [262] [439]

(9) Wooden mortars with wooden pestles for grinding dried maize or dried meat stand in every back yard. The mortar is a round block of wood about 3 feet long and 18 inches in diameter, hollowed out in one end to the depth of 8 or 10 inches. The block is set upright, and maize is placed in the hollow and pounded with a heavy wooden pestle about 3 or 4 feet long; a common sight every morning is to see women at the rear of the houses pounding out the corn meal or dried meat required for the day. 415 412 252

(10) In some houses a few porcelain cups, glasses, and table knives and forks are seen. 415

After resting, the men saunter around the village visiting their relatives and friends and discussing their crops and activities of the day. The women remain at home but men gather in small groups in front of the houses and are served maté by the women. Conversation goes on for some time after darkness falls. By 9 o'clock the visitors return to their respective houses and retire for the night. In hot weather people sleep naked, covered only by a thin cotton cover. In cold weather the men sleep in their shorts. If the mosquitoes are bad, thin cotton cloth serves as a makeshift mosquito net. No proper mosquito nets are used by the Terena.

During the rainy season when the crops are growing the men often remain at home repairing their houses or assisting one another in building new ones, repairing saddles, making handles for axes and hoes, and weaving fans, baskets, and mats. During this period the women spin cotton yarn, weave hammocks, make pottery, and sew clothes for themselves and their families. As everywhere in the world, the women have such constant duties as cleaning the house, cooking, washing, and taking care of the children. The older children, when not at school, are with their parents assisting them in everyday activities, little by little learning the common duties and techniques of adult life.

SOCIAL ORGANIZATION

MOIETIES

Terena informants relate that when they were in the Chaco they lived in villages and were divided into endogamous moieties. One moiety was called the *sukirikionó* or gentle people ("mansa" in Portuguese), and the other the *shumonó* or wild people ("brava" in Portuguese). Although these moieties were primarily ceremonial units, they exercised some social control over their members by regulating marriage and acting in council to settle matters concerning group decisions.

Each moiety had a chief (*unati ashé*). Any village of any size, therefore, had two moiety chiefs. The symbols of moiety chieftainship consisted of a small calabash (*kali ita'aka*), a trumpet made from a cow's horn, and a loincloth somewhat shorter than that worn by nonchiefs. There was no head chief for either moiety nor for the Terena people as a whole. Each chief was the ceremonial
